

Updaters,

**Pay serious heed to the following cautionary prerequisites and requirements:**

1. **DISABLE MIDI CLOCK.** If you do not you will damage, possibly irreparably, your new Flash-ROM chip.
2. Set your MIDI interface to 1MHz (this has nothing to do with “tempo,” which is preset), or whatever your slowest transmission speed is; if you do not you will damage your Flash-ROM chip irreparably. If your interface doesn't allow you to define this value **DO NOT PROCEED.** Contact Analogia Inc. further instructions.
3. Save off your own sounds (i.e., all ROM Banks & RAM Banks).
4. Follow these instructions to the letter—you are replacing your SE-1X's operating system. **THIS IS SERIOUS BUSINESS.**
5. Load/Install Se1xos075.mid. "Play it in" as you would any track sequence. You will be asked if you want to update O.S. Agree to proceed.
6. A successful update will return you to Bank 1, Patch 1.

**PLEASE NOTE:** ANALOGIA INC. / STUDIO ELECTRONICS are not responsible for damage caused to your Flash-ROM chip by power surges, improperly grounded setups, or user error.
